

1. The initial framewire has two photos of Kanye positioned side-by-side. The photos will horizontally slide away from each other and off of the webpage when clicking the center to reveal intro text. By modifying their margins with javascript. The photos will be positioned
2. The timeline will pan horizontally to progress from 2005 to 2015. As the user hovers to the right of the page with the mouse. I'll tell the javascript to adjust the margin of the image according to whether the mouse is on the far left or far right of the page. (Looking into `translateX()` for this effect.)
3. Hovering over a point on the timeline will cause a photo and a quote to appear. Similar to the Guardian example, I'll use the mouse's location to activate the hover. on the hover, I'll adjust the opacity of the image until the user clicks to learn more. (The quote will automatically be there on mobile)
4. Clicking a point on the timeline will be expanded to a broader explanation of the quote. The button on the top of the timeline will activate the rant explanation while the bottom button will activate the media mentions. I'll place create a div for each box to act as a mini frame within the entire window (again, like the guardian example).
